## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the loop-shaped provisions at each edge, claim 1, and the one tunnel-shaped provision at an edge, claim 3 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3612

3. Claims 3, 4, 7, 8, 11, 12, 13, 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

One cannot logically claim multiple provisions that are singular.

***Claim Rejections - 35 USC § 103***

4. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bohm et al. in view of either Holt or Artistic Blind.

Bohm et al. has the flexible sunshade screen 8, spaced parallel guides 15 with a channel opening toward the screen with a slot at 16, core member 20, and slot width smaller than the core. Bohm et al. does not use loops at the edge of the screen with a core within the loops, a feature notoriously old in the art as evidenced by the patent documents to both Holt and Artistic Blind at 23 and 3, respectively. In addition both Holt and Artistic Blind teach the use of a simpler channel guide of generally U-shaped structure to hold the looped edge of the screen. It would have been obvious to one of ordinary skill to provide in Bohm et al. a looped screen edge as taught by either Holt or Artistic Blind in order to provide a manually movable screen of simpler design with the requisite cost savings.

Applicant's claims are to each edge having multiple loop-shaped provisions while both Holt and Artistic Blind use a simple fold of the screen edge as a single provision. Such multiple loops are of common knowledge in the art for flexible panels, such as draperies, and would have been obvious to one of ordinary skill in the art in order to reduce contact surface and friction in movement.

As to claim 9, see fixed roof 4 of Bohm et al..

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Murayama discloses another side opening guide member for a screen. Lamb, two patents, Kokx, and Austin show further loops guides for a flexible member.
